**PROPOSITION 65 WARNING**

**WARNING**

**CALIFORNIA — Proposition 65 Warning**

Engine exhaust and some of its constituents, and some dust created by power sanding, sawing, grinding, drilling and other construction activities contains chemicals known to the State of California to cause cancer, birth defects and other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks.
- Cement and other masonry products.
- Arsenic and chromium from chemically treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: **ALWAYS** work in a well ventilated area, and work with approved safety equipment, such as dust masks that are specially designed to filter out microscopic particles.
Grinding/cutting/drilling of masonry, concrete, metal and other materials with silica in their composition may give off dust or mists containing crystalline silica. Silica is a basic component of sand, quartz, brick clay, granite and numerous other minerals and rocks. Repeated and/or substantial inhalation of airborne crystalline silica can cause serious or fatal respiratory diseases, including silicosis. In addition, California and some other authorities have listed respirable crystalline silica as a substance known to cause cancer. When cutting such materials, always follow the respiratory precautions mentioned above.

**WARNING**

Grinding/cutting/drilling of masonry, concrete, metal and other materials can generate dust, mists and fumes containing chemicals known to cause serious or fatal injury or illness, such as respiratory disease, cancer, birth defects or other reproductive harm. If you are unfamiliar with the risks associated with the particular process and/or material being cut or the composition of the tool being used, review the material safety data sheet and/or consult your employer, the material manufacturer/supplier, governmental agencies such as OSHA and NIOSH and other sources on hazardous materials. California and some other authorities, for instance, have published lists of substances known to cause cancer, reproductive toxicity, or other harmful effects.

Control dust, mist and fumes at the source where possible. In this regard use good work practices and follow the recommendations of the manufacturers or suppliers, OSHA/NIOSH, and occupational and trade associations. Water should be used for dust suppression when wet cutting is feasible. When the hazards from inhalation of dust, mists and fumes cannot be eliminated, the operator and any bystanders should always wear a respirator approved by NIOSH/MSHA for the materials being used.

NOTICE
Specifications and part numbers are subject to change without notice.
Ordering parts has never been easier!
Choose from three easy options:

Order via Internet (Dealers Only):
Order parts on-line using Multiquip’s SmartEquip website!
- View Parts Diagrams
- Order Parts
- Print Specification Information

Order via Fax (Dealers Only):
All customers are welcome to order parts via Fax.
Domestic (US) Customers dial: 1-800-6-PARTS-7 (800-672-7877)

Order via Phone: Domestic (US) Dealers Call:
1-800-427-1244

When ordering parts, please supply:
- Dealer Account Number
- Dealer Name and Address
- Shipping Address (if different than billing address)
- Return Fax Number
- Applicable Model Number
- Quantity, Part Number and Description of Each Part

When ordering parts, please supply:
- Specify Preferred Method of Shipment:
  - UPS/Fed Ex
  - DHL
  - Priority One
  - Ground
  - Next Day
  - Truck
  - Second/Third Day

Use the internet and qualify for a 5% Discount on Standard orders for all orders which include complete part numbers.*

Note: Discounts Are Subject To Change

Order via Internet (Dealers Only):
Goto www.multiquip.com and click on Order Parts to log in and save!

Order via Fax (Dealers Only):
Fax your order in and qualify for a 2% Discount on Standard orders for all orders which include complete part numbers.*

Note: Discounts Are Subject To Change

Order via Phone:

Non-Dealer Customers:
Contact your local Multiquip Dealer for parts or call 800-427-1244 for help in locating a dealer near you.

International Customers should contact their local Multiquip Representatives for Parts Ordering information.

When ordering parts, please supply:

NOTICE
All orders are treated as Standard Orders and will ship the same day if received prior to 3PM PST.

WE ACCEPT ALL MAJOR CREDIT CARDS!
SAFETY INFORMATION

Do not operate or service the equipment before reading the entire manual. Safety precautions should be followed at all times when operating this equipment. Failure to read and understand the safety messages and operating instructions could result in injury to yourself and others.

This operation manual has been developed to provide complete instructions for the safe and efficient operation of the Multiquip Model BPX Gasoline Backpack Vibrator. Refer to the engine manufacturer's instructions for data relative to its safe operation. Before using this vibrator, ensure that the operating individual has read and understood all instructions in this manual. This vibrator, other property, or the surrounding environment could be damaged if you do not follow instructions.

SAFETY MESSAGES

The four safety messages shown below will inform you about potential hazards that could injure you or others. The safety messages specifically address the level of exposure to the operator and are preceded by one of four words: DANGER, WARNING, CAUTION or NOTICE.

⚠️ DANGER
Indicates a hazardous situation which, if not avoided, WILL result in DEATH or SERIOUS INJURY.

⚠️ WARNING
Indicates a hazardous situation which, if not avoided, COULD result in DEATH or SERIOUS INJURY.

⚠️ CAUTION
Indicates a hazardous situation which, if not avoided, COULD result in MINOR or MODERATE INJURY.

NOTICE
Addresses practices not related to personal injury.

SAFETY SYMBOLS

Potential hazards associated with the operation of this equipment will be referenced with hazard symbols which may appear throughout this manual in conjunction with safety messages.

SAFETY INFORMATION

GENERAL SAFETY

**CAUTION**

- **NEVER** operate this equipment without proper protective clothing, shatterproof glasses, respiratory protection, hearing protection, steel-toed boots and other protective devices required by the job or city and state regulations.

- **NEVER** operate this equipment when not feeling well due to fatigue, illness or when under medication.

- **NEVER** operate this equipment under the influence of drugs or alcohol.

- **ALWAYS** check the equipment for loosened threads or bolts before starting.

- **NEVER** operate vibrator around corrosive chemicals or water containing toxic substances. These fluids could create serious health and environmental hazards. Contact local authorities for assistance.

- **DO NOT** use the equipment for any purpose other than its intended purposes or applications.

**NOTICE**

- This equipment should only be operated by trained and qualified personnel 18 years of age and older.

- This equipment is for industrial use only.

- Whenever necessary, replace nameplate, operation and safety decals when they become difficult to read.

- Manufacturer does not assume responsibility for any accident due to equipment modifications. Unauthorized equipment modification will void all warranties. Any modification which could lead to a change in the original characteristics of the machine should be made only by the manufacturer who shall confirm that the machine is in conformity with appropriate safety regulations.

- **NEVER** use accessories or attachments that are not recommended by Multiquip for this equipment. Damage to the equipment and/or injury to user may result.

- **ALWAYS** know the location of the nearest fire extinguisher.

- **ALWAYS** know the location of the nearest first aid kit.

- **ALWAYS** know the location of the nearest phone or keep a phone on the job site. Also, know the phone numbers of the nearest ambulance, doctor and fire department. This information will be invaluable in the case of an emergency.

**VIBRATOR SAFETY**

**DANGER**

- **NEVER** operate the equipment in an explosive atmosphere, near combustible materials, or near flammable or low flash point fluids. An explosion or fire could result causing severe bodily harm or even death.

**WARNING**

- **NEVER** disconnect any emergency or safety devices. These devices are intended for operator safety. Disconnection of these devices can cause severe injury, bodily harm or even death. Disconnection of any of these devices will void all warranties.

- **NEVER** operate equipment with covers or guards removed. Keep fingers, hands, hair, and clothing away from all moving parts to prevent injury. Wear clothing that will not likely become caught in the equipment or snag on the forms.

**CAUTION**

- **ALWAYS** be sure the operator is familiar with proper safety precautions and operating techniques before using vibrator.

- **NEVER** leave the vibrator unattended. Turn off engine when unattended.
SAFETY INFORMATION

■ NEVER lubricate components or attempt service on a running machine.

■ ALWAYS allow the vibrator a proper amount of time to cool before servicing.

■ ALWAYS keep the machine in proper running condition.

■ ALWAYS become familiar with the components of the vibrator before operating.

■ Fix damage to machine and replace any broken parts immediately.

■ ALWAYS store equipment properly when it is not being used. Equipment should be stored in a clean, dry location out of the reach of children and unauthorized personnel.

ENGINE SAFETY

⚠️ DANGER

■ The engine fuel exhaust gases contain poisonous carbon monoxide. This gas is colorless and odorless, and can cause death if inhaled.

■ The engine of this equipment requires an adequate free flow of cooling air. NEVER operate this equipment in any enclosed or narrow area where free flow of the air is restricted. If the air flow is restricted it will cause injury to people and property and serious damage to the equipment or engine. Remember the engine gives off DEADLY gases.

⚠️ WARNING

■ NEVER operate the engine with heat shields or guards removed.

■ DO NOT remove the engine oil drain plug while the engine is hot. Hot oil will gush out of the engine crankcase and severely scald any persons in the general area of the vibrator.

⚠️ CAUTION

■ NEVER touch the hot exhaust manifold, muffler or cylinder. Allow these parts to cool before servicing equipment.

■ ALWAYS place the engine ON/OFF switch in the OFF position when the vibrator is not in use.

■ NEVER tamper with the factory settings of the engine or engine governor. Damage to the engine or equipment can result if operating in speed ranges above the maximum allowable.

■ Refer to the Engine Owner’s Manual for engine technical questions or information.

■ NEVER run engine without an air filter or with a dirty air filter. Severe engine damage may occur. Service air filter frequently to prevent engine malfunction.

■ State Health Safety Codes and Public Resources Codes specify that in certain locations, spark arresters must be used on internal combustion engines that use hydrocarbon fuels. A spark arrester is a device designed to prevent accidental discharge of sparks or flames from the engine exhaust. Spark arresters are qualified and rated by the United States Forest Service for this purpose. In order to comply with local laws regarding spark arresters, consult the engine distributor or the local Health and Safety Administrator.

FUEL SAFETY

⚠️ DANGER

■ DO NOT add fuel to equipment if it is placed inside truck bed with plastic liner. Possibility exists of explosion or fire due to static electricity.

■ DO NOT start the engine near spilled fuel or combustible fluids. Gasoline fuel is extremely flammable and its vapors can cause an explosion if ignited.

■ ALWAYS refuel in a well-ventilated area, away from sparks and open flames.

■ ALWAYS use extreme caution when working with flammable liquids.

■ DO NOT fill the fuel tank while the engine is running or hot.

■ DO NOT overfill tank, since spilled fuel could ignite if it comes into contact with hot engine parts or sparks from the ignition system.
SAFETY INFORMATION

- Store fuel in appropriate containers, in well-ventilated areas and away from sparks and flames.
- **NEVER** use fuel as a cleaning agent.
- **DO NOT** smoke around or near the equipment. Fire or explosion could result from fuel vapors or if fuel is spilled on a hot engine.

**TRANSPORTING**
- **ALWAYS** shut down engine before transporting.
- Tighten fuel cap securely and close fuel cock to prevent fuel from spilling.
- **ALWAYS** use proper lifting techniques when using or moving the vibrator (backpack), flexible shaft, or vibrator assembly.

**ENVIRONMENTAL SAFETY/DECOMMISSIONING**

**NOTICE**

Decommissioning is a controlled process used to safely retire a piece of equipment that is no longer serviceable. If the equipment poses an unacceptable and unrepairable safety risk due to wear or damage or is no longer cost effective to maintain (beyond life-cycle reliability) and is to be decommissioned (demolition and dismantlement), be sure to follow rules below.

- **ALWAYS** observe all applicable compulsory regulations relevant to environmental protection, especially fuel storage, the handling of hazardous substances, and the wearing of protective clothing and equipment. Instruct the user as necessary, or, as the user, request this information and training.
- Dispose of hazardous waste properly. Examples of potentially hazardous waste include used motor oil, fuel, and fuel filters.
- **DO NOT** use food or plastic containers to dispose of hazardous waste.
- **DO NOT** pour waste or oil directly onto the ground, down a drain or into any water source.

**EMISSIONS INFORMATION**

**NOTICE**

The gasoline engine used in this equipment has been designed to reduce harmful levels of carbon monoxide (CO), hydrocarbons (HC) and nitrogen oxides (NOx) contained in gasoline exhaust emissions. This engine has been certified to meet US EPA Evaporative emissions requirements in the installed configuration.

Attempting to modify or make adjustments to the engine emission system by unauthorized personnel without proper training could damage the equipment or create an unsafe condition.

Additionally, modifying the fuel system may adversely affect evaporative emissions, resulting in fines or other penalties.

**Emission Control Label**

The emission control label is an integral part of the emission system and is strictly controlled by regulation(s).

The label must remain with the engine for its entire life.

If a replacement emission label is needed, please contact your authorized Honda Engine Distributor.

Contact your country's Department of Public Works or recycling agency in your area and arrange for proper disposal of any electrical components, waste or oil associated with this equipment.

When the life cycle of this equipment is over, remove battery (if equipped) and bring to appropriate facility for lead reclamation. Use safety precautions when handling batteries that contain sulfuric acid.

When the life cycle of this equipment is over, it is recommended that the unit frame and all other metal parts be sent to a recycling center.

Metal recycling involves the collection of metal from discarded products and its transformation into raw materials to use in manufacturing a new product.

Recyclers and manufacturers alike promote the process of recycling metal. Using a metal recycling center promotes energy cost savings.

GENERAL INFORMATION

The BPX backpack vibrator utilizes a Honda GXH50 2.5-hp, 4-stroke, overhead-valve, single-cylinder, gasoline engine. The frame is mounted on three rubber isolators to help reduce engine vibration. The vibrator comes standard with a quick-disconnect coupling for easy removal of the flexible shaft.

Tips

- Keep the bending radius of the flexible hose to a minimum during use.
- Avoid starting the unit with the vibrator head immersed in the concrete mix. After the engine has started, immerse the vibrator head into concrete mix.
- Excessive wear to the vibrating head can result from misuse. DO NOT allow the head to vibrate against already hardened concrete or steel used for reinforcement.
- NEVER drop or knock the vibrator head against any hard objects. This can damage the eccentric end bell assembly or bearings contained within the head.
- ALWAYS rinse or wipe off any wet concrete before it dries or hardens on any part of the unit (engine, shaft, or head).

WARNING

Before operating this gasoline-powered vibrator, the operator must read and understand the contents of the operation manual. Failure to read this manual may result in severe bodily harm and damage to the equipment.

Backpack Vibrator Theory

The purpose of this vibrator is to consolidate concrete by removing air pockets and voids.

The vibrator is designed to set the particles in fresh concrete in motion, thereby reducing friction and giving the mixture a mobile quality so that gravity and the displacement of entrapped air cause the concrete to settle easily into place.

By consolidating the concrete quickly, the vibrator allows stiffer mixes to be poured than would otherwise be possible.

Vibration also makes concrete more watertight, increases resistance to weathering, and creates a better bond between concrete and reinforcement.

Because vibration causes much of the entrapped air in concrete to rise to the surface, honeycombing is prevented. Vibration also eliminates most air pockets between the concrete and vertical forms.
1. **Hard Hat** — Always wear a hard hat for head protection.

2. **Safety Glasses** — Always wear safety glasses to protect eyes from foreign matter and debris.

3. **Rubber Gloves** — Always wear rubber gloves to protect hands from abrasive materials.

4. **Flexible Shaft** — The BPX can accommodate various shaft lengths. See Table 3 and Table 4 for shaft length dimensions.

5. **Vibrating Head** — The BPX can accommodate various vibrating heads. See Table 5 for various head types. Typical applications include large retaining walls, bridge decks, and columns.

6. **Rubber Boots** — Always wear rubber boots to protect feet from abrasive materials.

7. **Belt Guard** — Prevents access to the pulleys and V-belt while the vibrator is running. **DO NOT** operate the vibrator with this cover removed.

8. **Quick Disconnect Fitting** — Allows for the quick and easy removal of the flexible shaft from the vibrator.

9. **Throttle** — Push up (rabbit) to increase engine speed, and pull down (turtle) to decrease engine speed.

10. **Engine** — The BPX utilizes a Honda GXH50 2.5-hp, 4-stroke, overhead-valve, single-cylinder gasoline engine.

11. **Backpack Harness/Pad** — The BPX is equipped with an adjustable harness. Adjust the harness to a comfortable fit so that it will not slip or fall. A back pad has been added for operator comfort.

12. **Frame** — Made of a lightweight metal alloy, this frame features an engine support platform with a swivel base that can be rotated for better operator leverage over the application. In addition, the frame has three rubber shock mounts installed to help reduce engine vibration.
1. **Choke Lever** — Used in the starting of a cold engine, or in cold weather conditions. The choke enriches the fuel mixture.

2. **Spark Plug** — Provides spark to the ignition system. Clean the spark plug once a week.

3. **Recoil Starter** — Manual starting mechanism. Slowly pull the starter grip until resistance is felt, then pull briskly and smoothly to start the engine.

4. **Throttle Lever** — Adjusts engine RPM speed.

5. **Oil Drain Plug** — Remove this plug to remove oil from the engine's crankcase.

6. **Dipstick/Oil Filler Cap** — Remove to determine if engine oil is low. Add oil through this port as recommended in Table 6.

7. **Air Cleaner** — Prevents dirt and other debris from entering the fuel system. Press the latch tabs on top of the air cleaner cover and remove the cover to gain access to the filter elements.

**NOTICE**

Operating the engine without an air filter, or with a damaged or worn air filter in need of replacement, will allow dirt to enter the engine, causing rapid engine wear.

8. **Fuel Tank/Fuel Filler Cap** — The fuel tank holds 0.32 gallons (1.2 liters) of unleaded gasoline. Remove the fuel filler cap to add unleaded gasoline to the fuel tank. Make sure the cap is tightened securely. **DO NOT** overfill.

**DANGER**

**DO NOT** fill the fuel tank while the engine is running or hot. In the event of a fuel spill, **DO NOT** start the engine until all fuel residue has been wiped up and the area surrounding the engine is dry. Fuel is extremely flammable and can ignite if it comes into contact with hot engine parts or sparks from the ignition system.

9. **Muffler** — Reduces noise and emissions. **NEVER** touch the muffler while it is hot.

**WARNING**

Engine components can generate extreme heat. To prevent burns, **DO NOT** touch these areas while the engine is running or immediately after operating. **NEVER** operate the engine with the muffler removed.

10. **Engine ON/OFF Switch** — **ON** position permits engine starting, **OFF** position stops the engine.

11. **Fuel Valve Lever** — Open to allow the flow of fuel, and close to prevent the flow of fuel.
ASSEMBLY AND INSTALLATION

Some components must be installed before the vibrator can be operated. This section provides general instructions on how to install those components.

Flexible Shaft and Vibrator Head Selections

Use Table 3, Table 4, and Table 5 when selecting a flexible shaft or vibrator head for your unit. Longer shaft lengths (FS Series only) can be obtained with the use of a shaft coupler (P/N 3883-501). The FSN Series flexible shafts cannot be extended.

**WARNING**

NEVER use vibrator heads that are not recommended by the manufacturer, as they may create a hazardous condition when using the vibrator.

**NOTICE**

The QD coupler and spindle shaft (not shown) are incorporated onto the FS or FSN series shafts.

Head and Shaft Connections

**NOTICE**

The shafts are shipped from the factory pre-greased and require no greasing at this time. Refer to the Maintenance section of this manual for shaft greasing requirements.

Before operating the BPX, follow the instructions below to connect the flexible shaft, vibrator head, and vibrator.

**Connecting the Flexible Shaft and Vibrator Head**

**NOTICE**

The QD coupler and spindle shaft for the FS and FSN Series are included with the flexible shaft.

Perform the following procedure to attach the FS series or FSN series flexible shaft to the vibrator and vibrator head. Refer to Figure 4.

12. Pull up on the Quick Disconnect (Q.D.) locking knob and insert the Q.D. coupler into the eccentric end bell assembly.

13. Attach the vibrating head to the other end of the flexible shaft. The use of a small amount of pipe thread sealant (Red Loctite® 271™) is recommended on the flexible shaft casing coupling threads to prevent water from entering the vibrator head.

**Applying Loctite®**

When applying Red Loctite® 271™ to the flexible shaft casing threads:

1. Clean the mating connector or coupler threads with Loctite® Primer™.

2. Allow the primer to dry for several minutes before applying a ring of Red Loctite® 271™ to the middle of the flexible shaft casing threads.

3. Screw the head tightly onto the flexible shaft casing and wait one hour before use. The threads are left-handed; turn counterclockwise to tighten. An equivalent brand of anaerobic sealant may be used.

**DISASSEMBLY**

**CAUTION**

Wear protective leather gloves while disassembling the vibrator.

1. Remove the motor from the shaft.

2. Remove the core from the shaft housing. The head does not need to be removed unless it also requires servicing.

3. As the core is removed, slide it through a clean shop cloth to wipe off old grease. Keep it clean and off the ground or floor.

4. After inspecting the core for obvious damage, place a handful of clean grease (Shell Durina EP2 high-temperature, high-pressure grease or equivalent) in a shop cloth and slide the clean core through the grease as you feed the core back into the shaft housing. This will lightly coat the core. DO NOT overgrease. As the square end of the core approaches the head, turn the core slightly to engage the drive adaptor inside the head while continuing to push it towards the head.

5. Install the motor onto the shaft assembly and securely tighten the nut.

6. Test run the motor and check head vibration. DO NOT run the vibrator in the air (not in concrete mix) for longer than 1–2 minutes.
Figure 4. Flexible Head and Vibrator Head Connections
Engine Oil Check

1. To check the engine oil level, place the backpack frame on secure, level ground with the engine stopped.

2. Remove the filler dipstick from the engine oil filler hole (Figure 5) and wipe it clean.

3. Reinsert the dipstick, then remove it again without screwing it into the filler neck. Check the oil level shown on the dipstick.

4. If the oil level is low (Figure 6), fill to the edge of the oil filler hole with the recommended oil type (Table 6). Maximum oil capacity is 0.26 quarts (0.25 liters).

Fuel Check

Remove the fuel filler cap and inspect the fuel level in the tank. If fuel is low, replenish with unleaded fuel.

<table>
<thead>
<tr>
<th>Table 6. Oil Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Season</td>
</tr>
<tr>

<tr>
<td>Winter</td>
</tr>
</tbody>
</table>

DANGER

Motor fuels are highly flammable and can be dangerous if mishandled. DO NOT smoke while refueling. NEVER attempt to refuel while the engine is running or hot! ALWAYS remove the backpack before refueling.

V-Belt Check

A worn or damaged V-belt can adversely affect the performance of the vibrator.

1. Unscrew the seven bolts securing the belt guard to the unit.

2. Inspect the V-belt for defects or signs of wear.

3. If the V-belt is defective or worn, replace the V-belt as shown in the Maintenance section of this manual.

4. A properly tensioned V-belt (Figure 7) should deflect approximately 0.4–0.6 inches (5–10 mm) when 5 to 10 pounds of force are applied centrally between the pulleys.

Figure 5. Engine Oil Dipstick Removal

Figure 6. Engine Oil Level

Figure 7. V-Belt Tension
BEFORE STARTING

Before starting the BPX Gasoline Vibrator, perform the following:

- Read the safety instructions at the beginning of this manual.
- Clean the engine, removing dirt and dust, particularly the engine cooling air inlet, carburetor, and air cleaner.
- Check the air filter for dirt and dust. If the air filter is dirty, replace it with a new one.
- Check the carburetor for external dirt and dust. Clean with dry compressed air.
- Check all fastening nuts and bolts for tightness.
- Check the engine oil level.
- Check the fuel level.
- Check the tension and condition of the V-belt.

INITIAL START-UP

This section is intended to assist the operator with the initial start-up of the BPX vibrator. It is extremely important to read this section carefully before attempting to use the vibrator in the field.

Starting the Engine

1. Move the engine fuel valve lever (Figure 8) to the **ON** position.

2. If starting a **cold** engine, or if the **ambient temperature is cold**, place the choke lever in the **CLOSED** position (Figure 9).

3. If starting a **warm** engine, or if the **ambient temperature is warm**, place the choke lever in the **OPEN** position (Figure 10).

Figure 8. Engine Fuel Valve Lever (ON)

Figure 9. Engine Choke Lever (Closed)

Figure 10. Engine Choke Lever (Open)
4. Place the engine ON/OFF switch in the ON position (Figure 11).

![Figure 11. Engine ON/OFF Switch (ON)](image)

5. Place the ON/OFF switch located on the left strap to the ON position (Figure 12).

![Figure 12. Engine ON/OFF Switch (ON)](image)

6. Place the throttle lever (Figure 13) in the UP position (TURTLE) to start the engine in IDLE mode.

![Figure 13. Throttle Lever (Idle/Turtle Position)](image)

7. Slowly pull the starter grip (Figure 14) until resistance is felt, then pull briskly and smoothly to start the engine. Gently return the starter grip to its original position.

![Figure 14. Starter Grip](image)
8. If the engine has started, slowly return the choke lever to the **OPEN** position (Figure 15). If the engine has not started, repeat steps 1 through 7.

![Choke Lever (Open)](image)

**Figure 15. Choke Lever (Open)**

**WEARING THE BACKPACK**

1. With the engine running at idle, place the backpack on an elevated, flat, level surface (e.g. a workbench or tailgate of a truck). This will enable the operator to don the backpack more easily.

![Backpack Placement (Truck Tailgate)](image)

**Figure 16. Backpack Placement (Truck Tailgate)**

2. Place your arms through the shoulder straps and lift the backpack onto your back as shown in Figure 17.

3. Adjust the shoulder straps for comfort, then lock the shoulder strap buckle (Figure 17).

![Backpack Adjustment](image)

**Figure 17. Backpack Adjustment**

4. Adjust the waist strap for comfort, then lock the waist strap buckle.
1. Insert the vibrator head into the concrete.

2. Place the throttle lever in the DOWN position (RABBIT) for normal (FAST) engine operation (Figure 18).

3. Insert the vibrator head vertically into the concrete and move it in the pattern shown in Figure 19 to maintain a consistent area of influence.

4. Immerse the head for 5 to 10 seconds, until air stops rising, then withdraw the head slowly to let the concrete fill the void left by the vibrator head.

5. Keep the flexible shaft as straight as possible and DO NOT bend the flexible shaft sharply at any point. Sharp bends can cause overheating, necessitating early replacement of the flexible shaft.

**WARNING**

DO NOT attempt to operate the vibrator until the Safety, General Information, and Inspection sections of this manual have been read thoroughly and understood.

**NOTICE**

To keep the vibrator head cool, make sure it is kept completely below the concrete surface while vibrating.

**CAUTION**

If the shaft begins to helix (buckle) excessively during operation, STOP vibrating and investigate. This is an indication of an overload condition.

**NOTICE**

The vibrator head is cooled by the concrete. Operation of the vibrator head in the air (instead of concrete) for longer than two minutes will cause overheating of the bearings and premature head failure.
ENGINE SHUTDOWN

Normal Shutdown

1. Remove the flexible shaft and vibrator head from the concrete mix.
2. Place the throttle lever in the **UP** position (**TURTLE**) (Figure 20) and run the engine for three minutes at **idle** speed.
3. Place the ON/OFF switch located on the **left** strap to the **OFF** position (Figure 21).
4. Move the fuel valve lever to the **OFF** position (Figure 22).

---

**Figure 20. Throttle (Turtle/Idle Position)**

**Figure 21. ON/OFF Switch (OFF)**

**Figure 22. Fuel Valve Lever (OFF)**
5. Place the engine ON/OFF switch (Figure 23) in the OFF position.

---

**Emergency Shutdown**

To quickly shut down the engine while the vibrator is in use, place the engine ON/OFF switch located on the left strap to the OFF position (Figure 21).
Use Table 7 as a general maintenance guideline when servicing your engine. For more detailed engine maintenance information, refer to the engine owner's manual supplied with your engine.

(1) Service more frequently when used in dusty areas.

(2) These items should be serviced by your service dealer, unless you have the proper tools and are mechanically proficient. Refer to the Honda shop manual for service procedures.

(3) For commercial use, log hours of operation to determine proper maintenance intervals.
To enjoy trouble-free service from your Multiquip BPX gasoline backpack vibrator, follow the maintenance procedures outlined in this manual. For additional maintenance and service information, refer to the following manuals:

- Honda Engine Owner’s Manual
- MQ Flexshafts (FS and FSN Series) Manual

**WARNING**

 ALWAYS stop the engine when assembling, lubricating, or adjusting any part of the vibrator. Be sure to disconnect the spark plug wire, and secure it away from the spark plug.

### ENGINE MAINTENANCE

- Thoroughly remove dirt and oil from the engine and control area.
- Clean or replace the air cleaner elements as necessary.
- Check and retighten all fasteners as necessary.

### Spark Plug

Remove and clean the spark plug (Figure 25), and adjust the spark plug gap to 0.024–0.028 inch (0.6–0.7 mm). This unit has electronic ignition, which requires no further adjustments.

**Figure 25. Spark Plug**

### Engine Oil

**NOTICE**

Dispose of used oil properly. NEVER pour used oil on the ground or down a drain. Used oil can usually be taken to your local recycling center or service station for reclamation. ALWAYS follow all environmental rules and regulations in your area concerning the disposal of hazardous waste such as used oil and oil filters.

**NOTICE**

ALWAYS drain the engine oil while the oil is warm.

Refer to Figure 26.

**Figure 26. Draining Engine Oil**

1. Remove the oil drain bolt and sealing washer and allow the oil to drain into a suitable container.

2. Replace the engine oil with the recommended oil type as listed in Table 6. For engine oil capacity, see Table 1. DO NOT overfill.

3. Reinstall the drain bolt with sealing washer and tighten securely.
**Engine Air Cleaner**

**DANGER**

NEVER use gasoline or low flash point solvents to clean the engine or any of its components. The possibility exists of fire or explosion which can damage the equipment and cause severe bodily harm or even DEATH.

1. Press the latch tabs on top of the air cleaner cover and remove the cover and foam filter element (Figure 27).

   ![Figure 27. Engine Air Cleaner](image)

2. Clean the foam element (Figure 28) in warm, soapy water or non-flammable solvent. Rinse and dry thoroughly.

   ![Figure 28. Foam Element](image)

3. Dip the element in clean engine oil and completely squeeze out the excess oil from the element (Figure 28).

4. Reinstall the foam element and air cleaner cover.

**V-Belt Tension**

1. Remove the five screws securing the V-belt cover to the tensioning bracket.

   ![Figure 29. V-Belt Adjustment](image)

2. The V-belt can be adjusted by loosening the bolts on the tensioning bracket (Figure 29).

3. When the V-belt is properly tensioned, it should deflect approximately 0.4–0.6 inches (5–10 mm) when 5 to 10 pounds of force are applied centrally between the clutch pulley and drive pulley (Figure 30).

   ![Figure 30. V-Belt Tension](image)

4. Reinstall the V-belt cover.
VIBRATOR MAINTENANCE

Flexible Shaft Greasing Instructions

- Remove, clean, and grease the shaft core and bearings every 50 hours. Use Shell Durina EP2 or equivalent grease. Wipe off old grease completely and apply new grease evenly to the shaft. Reference the flexible shaft maintenance instructions shipped with the shaft.
- DO NOT allow water, dust or foreign debris to enter the flexible hose while reassembling.
- If the flexible shaft becomes too hot to hold, the unit may require lubrication. Lubricate the inner core. This will reduce heat buildup.

**NOTICE**

When replacing the flexshaft assembly, make sure the replacement core has been lightly greased before use.

Place a handful of clean grease (Shell Durina EP2 high-temperature, high-pressure grease or equivalent) in a shop cloth and slide the clean core through the grease as you feed it back into the shaft housing.

**NOTICE**

After every job, or every 50 hours, the shaft should be disassembled, cleaned, inspected, lubricated, and reassembled.

Vibrator Head

- Vibrator heads should be inspected and lubricated every 100 hours of operation. Reference the vibrator head maintenance instructions shipped with the vibrator head.
- ALWAYS inspect the vibrator head for damage to the threads after every reassembly. Replace housing and head as necessary.
- Measure vibrations per minute at the vibrator head to determine if the bearings in the head require replacement.

**NOTICE**

Use heat to break down the Loctite® while unthreading the head from the shaft. This will prevent damage to the threads.

Quick Disconnect Lock

A small amount of lightweight oil should be used on the quick disconnect locking mechanism (Figure 31) to lubricate the locking pin and spring and prevent concrete buildup.

![Figure 31. Quick Disconnect Lock](image)

PREPARATION FOR LONG-TERM STORAGE

For storage of the vibrator over 30 days, the following is required:

- Drain the fuel tank completely, or add STA-BIL® to the fuel.
- Run the engine until the gasoline in the carburetor is completely consumed.
- Completely drain the oil from the crankcase and refill with fresh oil.
- Remove the spark plug, pour 2–3 cc of SAE 30 oil into the cylinder, and crank slowly to distribute the oil.
- Slowly rotate the engine a few times with the starter rope and install a new plug.
- Pull out the starter rope slowly and stop at the compression point.
- Clean all external parts of the engine and frame with a soft cloth.
- Cover the unit and store in a clean, dry place.

#### NO. Column

- **Unique Symbols** — All items with same unique symbol (@, #, +, %, or >) in the number column belong to the same assembly or kit, which is indicated by a note in the “Remarks” column.

- **Duplicate Item Numbers** — Duplicate numbers indicate multiple part numbers, which are in effect for the same general item, such as different size saw blade guards in use or a part that has been updated on newer versions of the same machine.

#### QTY. Column

- **Numbers Used** — Item quantity can be indicated by a number, a blank entry, or A/R.

- **A/R (As Required)** is generally used for hoses or other parts that are sold in bulk and cut to length.

- A blank entry generally indicates that the item is not sold separately. Other entries will be clarified in the “Remarks” Column.

#### REMARKS Column

Some of the most common notes found in the “Remarks” Column are listed below. Other additional notes needed to describe the item can also be shown.

- **Assembly/Kit** — All items on the parts list with the same unique symbol will be included when this item is purchased.

  Indicated by:
  
  “INCLUDES ITEMS W/(unique symbol)”

- **Serial Number Break** — Used to list an effective serial number range where a particular part is used.

  Indicated by:
  
  “S/N XXXXX AND BELOW”
  “S/N XXXX AND ABOVE”
  “S/N XXXXX TO S/N XXX”

- **Specific Model Number Use** — Indicates that the part is used only with the specific model number or model number variant listed. It can also be used to show a part is NOT used on a specific model or model number variant.

  Indicated by:
  
  “XXXXX ONLY”
  “NOT USED ON XXXX”

- **Make/Obtain Locally** — Indicates that the part can be purchased at any hardware shop or made out of available items. Examples include battery cables, shims, and certain washers and nuts.

- **Not Sold Separately** — Indicates that an item cannot be purchased as a separate item and is either part of an assembly/kit that can be purchased, or is not available for sale through Multiquip.

**NOTICE**

When ordering a part that has more than one item number listed, check the remarks column for help in determining the proper part to order.

### PART NO. Column

- **Numbers Used** — Part numbers can be indicated by a number, a blank entry, or TBD.

  TBD (To Be Determined) is generally used to show a part that has not been assigned a formal part number at the time of publication.

  A blank entry generally indicates that the item is not sold separately or is not sold by Multiquip. Other entries will be clarified in the “Remarks” Column.

PAYMENT TERMS
Terms of payment for parts are net 30 days.

FREIGHT POLICY
All parts orders will be shipped collect or prepaid with the charges added to the invoice. All shipments are F.O.B. point of origin. Multiquip’s responsibility ceases when a signed manifest has been obtained from the carrier, and any claim for shortage or damage must be settled between the consignee and the carrier.

MINIMUM ORDER
The minimum charge for orders from Multiquip is $15.00 net. Customers will be asked for instructions regarding handling of orders not meeting this requirement.

RETURNED GOODS POLICY
Return shipments will be accepted and credit will be allowed, subject to the following provisions:

1. A Returned Material Authorization must be approved by Multiquip prior to shipment.
2. To obtain a Return Material Authorization, a list must be provided to Multiquip Parts Sales that defines item numbers, quantities, and descriptions of the items to be returned.
   a. The parts numbers and descriptions must match the current parts price list.
   b. The list must be typed or computer generated.
   c. The list must state the reason(s) for the return.
   d. The list must reference the sales order(s) or invoice(s) under which the items were originally purchased.
   e. The list must include the name and phone number of the person requesting the RMA.
3. A copy of the Return Material Authorization must accompany the return shipment.
4. Freight is at the sender’s expense. All parts must be returned freight prepaid to Multiquip’s designated receiving point.
5. Parts must be in new and resalable condition, in the original Multiquip package (if any), and with Multiquip part numbers clearly marked.
6. The following items are not returnable:
   a. Obsolete parts. (If an item is in the price book and shows as being replaced by another item, it is obsolete.)
   b. Any parts with a limited shelf life (such as gaskets, seals, “O” rings, and other rubber parts) that were purchased more than six months prior to the return date.
   c. Any line item with an extended dealer net price of less than $5.00.
   d. Special order items.
   e. Electrical components.
   f. Paint, chemicals, and lubricants.
   g. Decals and paper products.
   h. Items purchased in kits.
7. The sender will be notified of any material received that is not acceptable.
8. Such material will be held for five working days from notification, pending instructions. If a reply is not received within five days, the material will be returned to the sender at his expense.
9. Credit on returned parts will be issued at dealer net price at time of the original purchase, less a 15% restocking charge.
10. In cases where an item is accepted, for which the original purchase document can not be determined, the price will be based on the list price that was effective twelve months prior to the RMA date.
11. Credit issued will be applied to future purchases only.

PRICING AND REBATES
Prices are subject to change without prior notice. Price changes are effective on a specific date and all orders received on or after that date will be billed at the revised price. Rebates for price declines and added charges for price increases will not be made for stock on hand at the time of any price change.

SPECIAL EXPEDITING SERVICE
A $35.00 surcharge will be added to the invoice for special handling including bus shipments, insured parcel post or in cases where Multiquip must personally deliver the parts to the carrier.

LIMITATIONS OF SELLER’S LIABILITY
Multiquip shall not be liable hereunder for damages in excess of the purchase price of the item with respect to which damages are claimed, and in no event shall Multiquip be liable for loss of profit or good will or for any other special, consequential or incidental damages.

LIMITATION OF WARRANTIES
No warranties, express or implied, are made in connection with the sale of parts or trade accessories nor as to any engine not manufactured by Multiquip. Such warranties made in connection with the sale of new, complete units are made exclusively by a statement of warranty packaged with such units, and Multiquip neither assumes nor authorizes any person to assume for it any other obligation or liability whatever in connection with the sale of its products. Apart from such written statement of warranty, there are no warranties, express, implied or statutory, which extend beyond the description of the products on the face hereof.

Effective: February 22, 2006
