PREHEAT LAMP DOES NOT LIGHT

Is 12VDC present at the glow plug when in the preheat position?

NOTE 1: The engine is not preheated if the glow plug is broken, even if the lamp lights. Check the glow plug current for 30 amps if not started normally.

Is 12VDC applied across terminal 19 of the terminal board to ground?

Glow plug is defective

Is the Glow lamp defective?

Timer Relay is defective

Replace Glow Lamp
