UWKB Wheel Kit

For Use on Portable Generators, Pumps, and Welders

The following instructions are intended to assist the user in the assembly of the UWKB Wheel Kit for use on Multiquip portable generators, pumps, and welders. Please read the entire instructions before assembling the wheel kit.

REQUIRED TOOLS

- Ratchet Set with 10 mm socket
- Adjustable Wrench or 10 mm open-end wrench
- Pliers

PARTS

Verify that all parts are accounted for. See Table 1.

WORK SAFELY!

Only a qualified service technician with proper training should perform this installation. Follow all shop safety rules when performing this installation.

PROCEDURE

1. Assemble the axle mounts (See Figure 1). Push the wheel (item 1) on the axle mount (item 3) and then insert the cotter pin (item 2) through the outer axle hole. Bend the cotter pin to secure the wheel in place. Repeat this step for the other axle mount (item 4).

2. Turning your unit on its side, or while having a second person lifting the side in the air, place the axle mount under the frame tubing on the side of the unit as shown in Figure 2.
3. Set the rounded corner of the tubing in the bracket at the back of the axle mount and place a screw (item 5) and flat washer (item 6) through the holes, securing the tubing in place. Place another flat washer and a nyloc nut (item 7) on the threaded end of the screw and tighten.

4. Secure the axle mount to the frame tubing by placing a small clamp (item 8) over the frame tubing and the axle mount. Place a large clamp (item 9) over the small clamp. Insert screw (item 18) into the small clamp and secure with nyloc nut (item 7) and washer (item 6). Tighten screw until the clamp securely holds the axle mount to the frame tubing.

5. Repeat steps 2 through 4 to attach the axle mount to the opposite side of the unit.

6. Insert a flat washer (item 16) into the crutch tip (item 17) and place the combined items over the open end of the handle mount (item 15). See Figure 3.

7. Insert the end of the handle tube (item 13) with the screw hole into the top bracket of the handle mount. Slide a clevis pin (item 10) and flat washer (item 11) through the bracket and handle tube holes. Place another flat washer on the end of the clevis pin. Insert a cotter pin (item 12) through the hole in the clevis pin to secure the handle tube to the handle mount.

8. Slide the hand grip (item 14) over the open end of the handle tube.

9. Lifting the front of the unit, set the rounded corner of the frame tubing into the support bracket on the handle mount (Figure 4). Secure the handle mount to the frame tubing by placing a large clamp (item 9) around the frame tubing and the handle mount. See Figure 4.

   **Figure 4. Securing Handle Mount to the Frame**

10. Insert the small clamp (item 8) on the other side of the handle mount and frame tubing, so that the large and small clamps are facing each other.

11. Insert screw (item 18) into small clamp and secure with nyloc nuts (item 7). Tighten screw until the clamp securely holds the handle mount to the frame tubing.

12. Repeat steps 9 through 11 to attach the handle mount to the other side of the unit.

---

**NOTICE**

Attach the axle mounts so that the wheels are located under the heaviest end of your unit. The placement of the axle mounts may differ on each type of equipment.
