The following instructions are intended to assist the user in the installation of the Standard Handle (SXHC) and Quick Pitch™ Handle (QXHC) on Multiquip walk-behind trowels. It is not intended to take the place of the Operation and Parts manual shipped with the trowel. Refer to the Operation and Parts manual for safety, operation, and maintenance information. If you did not receive a manual with your trowel, contact Multiquip at (800) 421-1244 for a replacement.

REQUIRED TOOLS

- 1/2" (2), 9/16" (2), 7/16" Open-End Wrenches
- Phillips Screwdriver

PARTS

Verify that all parts are accounted for. See Figure 1 and Table 1.

WORK SAFELY!

Only a qualified service technician with proper training should perform this installation. Follow all shop safety rules when performing this installation.

PREPARATION

1. Make sure trowel is turned off and engine is cool.
2. Place the trowel in an area free of dirt and debris. Make sure it is on secure level ground.
UNPACKING THE HANDLE

The handle (Figure 2) is shipped in the folded or stowed position.

1. To place the folding upper handle in the operational position, simply turn the star wheel counterclockwise to release it from its folded or stowed position.

2. Next, pull back on the upper handle and place the handle in the desired position. Turn the star wheel clockwise to lock firmly in place so that it will not move or slip.

MAIN HANDLE TUBE INSTALLATION

Attach the main handle tube to the gearbox using the supplied hardware as shown in Figure 3.
BLADE PITCH CABLE INSTALLATION

1. For trowels equipped with a standard handle (SXHC), simply turn the star wheel counterclockwise to release tension on the blade pitch cable. See Figure 4.

![Figure 4. Adjusting Cable Blade Pitch (Standard Handle)](image)

2. For trowels equipped with a Quick Pitch™ T-handle (QXHC), simply squeeze the trigger lock and push the T-handle towards the engine to release tension on the blade pitch cable. See Figure 5.

![Figure 5. Adjusting Cable Blade Pitch (Quick-Pitch™ Handle)](image)

3. Remove brass set nut #1 from the blade pitch cable end (Figure 6).

![Figure 6. Blade Pitch Cable](image)

4. Thread brass set nut #2 towards the cable as far as possible (Figure 6).

5. Insert the cable end through the yoke eyelet (Figure 7). Tighten brass set nut #1 by hand to remove all the slack from the cable.

![Figure 7. Cable Yoke Attachment](image)

6. Using a wrench, tighten the brass set nut #2 up against the yoke boss. This will lock the cable in place.

7. Using a wrench, tighten the brass set nut #1 against the yoke boss.

WARNING

The Quick Pitch™ T-handle is under spring tension and can snap in the direction of force (toward the user) if not firmly grasped, which may cause bodily injury.
**THROTTLE CABLE INSTALLATION**

Refer to Figure 8.

1. Uncoil the throttle cable and housing.
2. Check that the throttle cable is fed through the tube on the underside of the handle and secured to the upper handle and main tube with the zip ties.
3. Place the throttle in the run position (Figure 9).

**Figure 8. Throttle Cable Installation**

4. Back off both the cable housing clamp screw and the swivel stop screw.

**Figure 9. Adjusting Cable Tension**

5. Place the primary throttle return spring (P/N 21746) between the cable housing clamp and the swivel stop screw.
6. Feed the cable assembly through the cable housing clamp, primary throttle return spring, and swivel stop hole, until the cable housing extends under the housing clamp to its far edge.
7. On the throttle lever, slightly loosen the locking nut and cable retaining screw as shown in Figure 9.

8. Ensure that the cable housing is seated in the throttle cable receiver as shown in Figure 9.
9. Route the throttle wire past the cable retaining screw approximately 1/2" (Figure 9). Tighten the cable retaining screw to secure the throttle wire.
10. Adjust cable tension by loosening or tightening the locking nut and cable retaining screw on the throttle lever (Figure 9).

**NOTICE**

If the throttle lever does not return to the neutral position with the throttle backed off, loosen the adjusting nut 1/2 turn at a time, tighten, and recheck. Readjust throttle tension as necessary.
1. Uncoil the free end of the clutch cable.

2. Check that the clutch cable (Figure 10) is attached to the torsion bar cable anchor and clutch cable support bracket.

3. Check that the clutch cable is fed along the tube on the underside of the upper handle and secured to the main tube with the zip ties.

4. Using a 7/16" wrench, remove the three 1/4" retaining bolts that secure the clutch cover to the frame (Figure 11).

5. Route the clutch cable (Figure 12) underneath the topmost rung of the guard ring.

6. Remove the 5/16" outer nut (Figure 13) and rubber cap from the threaded end on the clutch cable.

---

**INSTACLUTCH CABLE INSTALLATION**

**Figure 10. Upper Handle Clutch Cable**

**Figure 11. Clutch Cover Removal**

**Figure 12. Clutch Cable Routing**

**Figure 13. Outer Nut And Rubber Cap Removal**

---

**NOTICE**

Clutch cable routing differs depending on the trowel model. If using trowel model JH55C, the clutch cable is routed **under** the topmost rung of the guard ring.

If using trowel models JH90C, BH90C, or BH11C, the clutch cable is routed **over** the topmost rung of the guard ring.
7. Adjust the 5/16" inner nut (Figure 14) away from the threaded end on the clutch cable to the inner nut.

8. Insert the exposed cable (Figure 15) into the cable slot on the cable support bracket.

9. Connect the clutch cable to the clutch anchor by placing the spring loop over the clutch anchor flats as shown in Figure 16. Use needle nose pliers to slide the spring loop fully into the groove.

10. Tighten the inner nut (Figure 17) against the clutch cable support bracket until there is no longer any slack in the cable between the threaded cable end and the clutch cable spring.

11. Using two 1/2" wrenches, tighten the inner and outer nut against the clutch cable support bracket.
INSTACLUTCH OPERATION

Starting The Trowel

1. Place the trowel in an area free of dirt and debris. Make sure it is on secure, level ground.
2. Start the engine as described in the Operation manual supplied with the trowel.
3. Run the engine for a few minutes. Make sure there are no fuel leaks or loose components.
4. Stand in the operator’s position (Figure 18) behind the trowel and grasp both hand grips securely.

**NOTICE**
Failure to follow these safe operation instructions can cause serious injury to the operator or bystanders and property damage. NEVER leave the trowel unattended with the engine running at high speed.

5. With one hand on the left-side handgrip, move the throttle lever (Figure 19) from IDLE to the RUN position.

![Figure 19. Throttle Lever (Run/Idle)](image)

6. Firmly grasp the left-side handgrip, squeeze and hold right-side clutch lever (Figure 20) to engage the clutch.

![Figure 20. Engaging The Clutch](image)

**WARNING**
BEFORE ENGAGING THE CLUTCH MECHANISM, ALWAYS MAINTAIN A FIRM GRASP ON THE LEFT-SIDE HAND GRIP WITH YOUR LEFT HAND. FAILURE TO DO SO CAN RESULT IN A RUNAWAY TROWEL, WHICH CAN CAUSE SERIOUS INJURY TO THE OPERATOR OR BYSTANDERS AND PROPERTY DAMAGE.

7. Verify that the trowel blades are rotating.
8. Begin troweling.

Stopping The Trowel

While maintaining control of the trowel with a firm grasp of the left-side hand-grip.

1. Release the clutch lever and verify the trowel blades have stopped rotating.
2. Return the throttle lever (Figure 19) to the IDLE position.
3. Release the handle and place engine ON/OFF switch in the OFF position.

**NOTICE**
Operator must keep at least one hand on either grip at all times when operating the trowel.
